

# Global IoT roll-out planning

Create a reliable IoT roll-out plan for your devices

- Ensure alignment with local market regulations:
  - Certification rules
  - Hardware limitations
- Ensure alignment with local technology restrictions:
  - Supported frequency bands per technology
  - Network coverage footprint per technology (RAT)
  - 2G/3G phase-out plans
- Taking location characteristics into account:
  - indoor attenuation (e.g. smart-meters)
- Consider IoT use-case or device characteristics:
  - Data & facts for the rollout (size, industry specific limitations)
  - Application characteristics
  - Use-case limitation (e.g. energy consumption, data volume)
