

SAR- Measurements In Pre- Compliance And Certification Phase

SAR (Specific Absorption Rate) testing must be done on radio devices that are used closer than 20 cm to the human head or body. SAR is a measure which explains how much radio frequency energy is absorbed by the user's or bystander's body or head.

Verkotan SAR services include:

- SAR testing for CE/FCC/ISED
- RF exposure evaluations for low power device
- RF exposure evaluations for devices further than 20 cm from user
- Country specific testing
- Pre-compliance measurements to support product development

- More than 20 years of experience in SAR testing
- Support throughout the product development life cycle
- Extensive technical expertise to ensure a safe and reliable product.
